PROFESSIONAL SUMMARY

Full-Stack Software Engineer specializing in Laravel, React, and MySQL, with a Statistics background that strengthens data-driven decision-making. Builds secure, scalable web applications — including SaaS platforms, multi-tenant systems, and REST APIs — from the ground up. Focused on clean architecture, maintainable code, and shipping production-ready software.

TECHNICAL SKILLS

Languages: PHP, JavaScript, Python, SQL, HTML5, CSS3

Frameworks & Libraries: Laravel, React, Tailwind CSS, Vite, Sanctum, Axios

Databases: MySQL, MariaDB

Tools: Git, GitHub, Composer, NPM, PNPM, VS Code, Postman, XAMPP, Homebrew

Concepts: REST APIs, MVC Architecture, Authentication & Authorization, Database Design, API Integration, CRUD Applications, Responsive Web Design, OOP, Multi-Tenant Architecture

PROJECTS

WhatsApp Order & Inventory Management System

Tech Stack: Laravel, WhatsApp API, MySQL, REST API

- Built a WhatsApp-powered inventory and ordering platform enabling retailers and pharmacies to manage stock and orders directly through chat.
- Engineered a modular REST API architecture supporting automated stock tracking and order processing.
- Structured the backend for multi-business scalability, allowing future enterprise deployment without rework.

Move2Bio — Link-in-Bio SaaS Platform

Tech Stack: Laravel, React, Tailwind CSS, MySQL, Sanctum

- Built a full-stack link-in-bio SaaS platform with secure user authentication via Laravel Sanctum.
- Developed REST APIs powering a dynamic, customizable user dashboard.
- Implemented a fully responsive UI in React and Tailwind CSS, optimized for mobile-first use.

Multi-Tenant SaaS Backend

Tech Stack: Laravel, MySQL

- Architected a multi-tenant database system supporting isolated organizations with shared infrastructure.
- Built role-based access control (RBAC) and secure authentication across tenant boundaries.
- Delivered a scalable API layer following Laravel best practices for maintainability and growth.

Real Estate Marketplace Platform (In Progress)

Tech Stack: Laravel, React, MySQL

- Building a property marketplace connecting landlords, tenants, agents, and legal service providers.
- Designing a scalable backend to support listings, multi-role user types, and transaction workflows.

EXPERIENCE

Full-Stack Developer — Independent Projects

2024 – Present

- Designed and built multiple production-style Laravel web applications from concept to deployment.
- Developed RESTful APIs consumed by React front-ends across several independent projects.
- Designed relational database schemas supporting multi-tenant and role-based systems.
- Implemented secure authentication and authorization using Laravel Sanctum.
- Built responsive, accessible interfaces using React and Tailwind CSS.

- Managed version control and codebase organization using Git.
- Profiled and optimized database queries to improve application response times.

EDUCATION

Bachelor of Science (B.Sc.) in Statistics

[ADD GRAD YEAR]

[ADD UNIVERSITY NAME]

ADDITIONAL INFORMATION

- Strong analytical background from Statistics, applied to data-informed engineering decisions.
- Passionate about backend engineering and scalable software architecture.
- Fast learner with excellent debugging and problem-solving skills.
- Interested in SaaS, fintech, enterprise software, and AI-powered applications.
